

PENETRATION TESTING THAT TRANSFORMS VULNERABILITIES INTO DEFENSE

Simulate real-world threats to strengthen
your defenses!

OVERVIEW: SIMULATING THE ADVERSARY

Real-world testing that reveals risk before attackers do

Protecting your organization requires understanding who your adversaries are and how they operate. Maveric's Penetration Testing Services replicate sophisticated attack methods used by real-world threat actors to evaluate the effectiveness of your people, processes, and technologies. Our controlled simulations uncover exploitable weaknesses and deliver a prioritized, actionable roadmap to reduce risk before attackers find it.

KEY BENEFITS

Enhance resilience through expert validation

- 
Visibility
 Identify and mitigate vulnerabilities across applications, networks, wireless, and mobile, reducing the attack surface.
- 
Objectivity
 Gain an objective perspective that exposes blind spots internal teams may miss.
- 
Validation
 Confirm that existing security controls can defend against sophisticated, real-world attacks.
- 
Focus
 Prioritize security investments using risk-based insights to target the highest-impact improvements.

HOW MAVERIC ADDRESSES YOUR UNIQUE CHALLENGES

Discover

External attack surface & internet-facing assets discovery (automated + manual).

Simulate

Real-world exploit scenarios: web, mobile, network, wireless, insider, and red team exercises.

Detect

Test detection and response: measure how your tools and teams surface and act on attacks.

Remediate

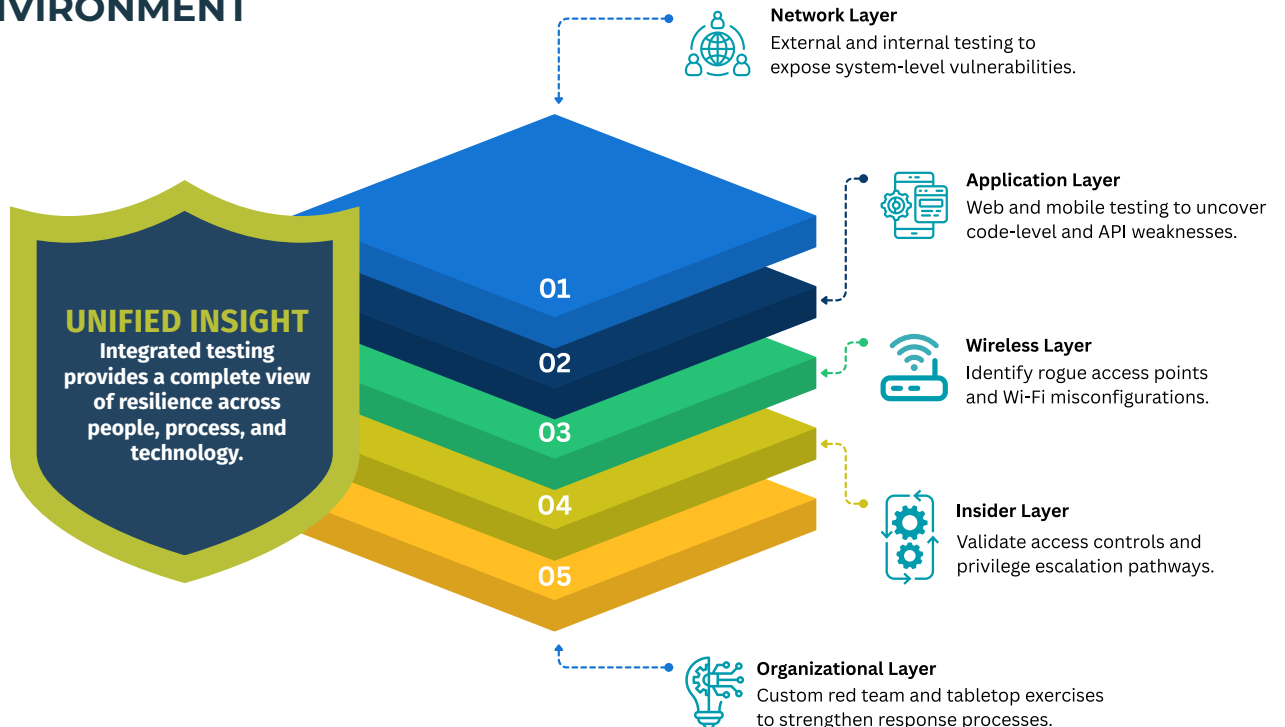

Actionable remediation roadmap, prioritized by business impact and exploitability.

CAPABILITIES & FEATURES

Maverc Technologies delivers comprehensive penetration testing services that emulate real-world cyberattacks to evaluate the resilience of your IT environment against today's advanced tactics and techniques. Each engagement is customized to your organization's specific objectives, risk profile, and threat landscape. The following are among the most common types of penetration tests performed by Maverc's security experts.

External network penetration testing	Assess internet-facing systems for exploitable vulnerabilities and unauthorized access.
Internal (red team) exercises	Simulate lateral movement, privilege escalation and post-exploit objectives inside your environment.
Web application testing	Three-phase testing (reconnaissance, discovery, exploitation) to find high-impact app flaws.
Mobile application testing	Simulate real-world attacks against mobile clients and APIs to reveal data and integrity risks.
Wireless network testing	Identify Wi-Fi misconfigurations, session reuse issues and unauthorized devices.
Insider threat testing	Assess permissions, service misconfigurations, and escalation pathways that could enable insider compromise.
Custom red team & tabletop	Tailored scenarios and executive tabletop exercises to validate people and processes.

COMPREHENSIVE COVERAGE ACROSS YOUR ENVIRONMENT

WHY CHOOSE MAVERC

Real-world expertise

Maverc's experts combine decades of hands-on experience in threat detection, incident response, and compliance to think like real adversaries and expose unseen risks.

Tailored engagements

Each test is customized to your environment, aligning with your unique risk profile and compliance objectives to deliver focused, actionable results.

Advanced threat intelligence

Our assessments mirror modern attack behavior using current threat intelligence and proven adversary tactics, techniques, and procedures (TTPs).

Beyond vulnerability scanning

We go beyond automated scans with deep, manual testing that shows how vulnerabilities can be exploited to reveal real business impact.

KEY OUTCOMES WE DELIVER

Our penetration testing engagements help reduce exploitable exposure across your attack surface while validating how effectively your defenses detect and contain real-world threats. By simulating advanced attack scenarios, we provide clear visibility into your true level of resilience.

Each engagement concludes with a prioritized remediation roadmap aligned to business impact and compliance objectives. This ensures that every recommendation translates into measurable security improvement and lasting risk reduction.

ABOUT US

Maverc Technology provides offensive security services that simulate real-world cyberattacks to evaluate and strengthen enterprise defenses. Our team blends hands-on threat operations experience with threat intelligence to deliver tailored penetration tests and red team engagements that align with your regulatory and operational requirements.
